Scenario:

You are a teenager in high school who has to juggle swim practice, a job, school, and taking care of your little sister. You often lose track of time and end up staying up too late. You need to keep your sleep schedule in check in order to feel energized and complete all your required responsibilities.

Task 1: Create a new alarm for 7:30 am and label it "School"

Task 2: Choose the math and exercise wake-up tasks and edit the workout task to 20 push-ups and 30 sit-ups

Task 3: View your sleep graphs and rate your last night of sleep 3 out of 5 stars

Notes:

What changes should you make to your application (min 3 things):
- Make editing the wake-up tasks more user-friendly
- Add more options on the alarm editing screen
- Add option to skip next alarm and delete alarms on the home screen
- Add more exercise options
- Flesh out the math task and the shake task
- Make the sleep graph easier to read

What should we keep the same in our application (min 3 things):
- The 'time until next alarm' on the home screen
- Keep but improve upon the wake-up message recording
- The sleep graph and rating nights of sleep to find the perfect sleep amount
- The wake-up tasks
- The leaderboard feature
